

# Your accuracy expectations

Assume that you had one-page descriptions of 100 conflicts, each involving two or three parties, and you must obtain predictions as to the decisions that will be made. For each conflict, there are between 3 and 6 possible outcomes and, selecting randomly, one would be correct 28% of the time. Please record the percentage of correct predictions that you would expect from each of the methods:

	<u>% Correct</u>
<b><u>Decisions</u></b>	
<b>Non-experts</b>	
Unaided judgment	_____
 Simulated interaction	_____
<b>Experts</b>	
Unaided judgment	_____
Game theory	_____
Structured analogies	_____
Simulated interaction	_____
Delphi technique (2 rounds)	_____
Prediction markets	_____
<b>Combine across relevant methods</b>	_____
